PROFESSIONAL SUMMARY

Computer Science graduate and fresher with hands-on project experience in AWS cloud infrastructure, Linux systems, and basic IT/application troubleshooting. Familiar with deploying and securing simple cloud environments, monitoring server health, and following structured steps to identify and fix common issues. Completed a 6-month Cloud Application internship at DataBinaries (Jan 2026 – Jul 2026), working on AWS-hosted web and application deployments, monitoring, troubleshooting, and Root Cause Analysis documentation. Recognised for good technical skills and a self-motivated attitude towards learning new technologies. Seeking an entry-level opportunity in IT Support / Cloud Support to apply these skills and continue building practical, real-world experience.

TECHNICAL SKILLS

Operating Systems: Linux (Ubuntu, Amazon Linux)

Cloud & Infrastructure: AWS (EC2, S3, IAM, VPC, SSH, Security Groups, SNS, RDS, ALB)

Monitoring: OS-level Monitoring, CloudWatch, Prometheus, Grafana

Troubleshooting: L1/L2 Issue Diagnosis, Basic Networking (ping / nslookup), Service & Port Issue Resolution, Log-Based Root Cause Analysis

ITIL: Incident Management, Problem Management, Change Management, SLA

DevOps: GitHub, Jenkins, Docker, Kubernetes, Terraform

Core Competencies: System Troubleshooting, Log Analysis, Process Management, Service Management

Database: MySQL - Basic SQL Queries (Select, Insert, Update, Delete), DDL/DML

INTERNSHIP EXPERIENCE

Cloud Application Intern — DataBinaries, Chhatrapati Sambhajinagar, Maharashtra

05 Jan 2026 – 08 Jul 2026

Worked on hands-on cloud and application support projects on AWS, covering deployment, security, monitoring, backup, troubleshooting, and RCA documentation. Projects completed during the internship:

AWS Cloud Infrastructure Deployment — Web Hosting, Monitoring & Automated Backup

Internship Project | *https://github.com/huzaifakhatib/aws-cloud-infra-support-project*

- Deployed and secured an EC2 (Ubuntu) instance hosting an Apache web server, with Security Groups and firewall rules to control access.
- Identified and fixed a service conflict between two web server processes running on the same port.
- Set up automated daily backups to Amazon S3 using a scheduled Bash script.
- Configured CloudWatch alarms with email notifications to monitor server CPU usage.
- Practiced incident troubleshooting by simulating a service outage and following a detect → diagnose → resolve → verify process, with a short Root Cause Analysis (RCA) write-up.

Tools: AWS (EC2, S3, IAM, CloudWatch), Ubuntu Linux, Apache, Bash Scripting, Cron

Application Support Troubleshooting — WordPress & MySQL on AWS

Internship Project | *https://github.com/huzaifakhatib/application-support-troubleshooting-project*

- Deployed a WordPress application with a MySQL database on an AWS EC2 instance, and set up a dedicated database user for the app.
- Fixed a PHP installation issue that was preventing the website from loading correctly.
- Resolved a server slowdown caused by low memory by adding extra swap space.
- Practiced troubleshooting a database connection issue by restarting the service and confirming the site was working again.
- Documented a simple Root Cause Analysis (RCA) for each issue, noting the problem, the fix, and how to prevent it.

Tools: AWS EC2, Ubuntu Linux, Apache2, PHP, MySQL, WordPress

EDUCATION

Bachelor of Computer Applications (BCA) 2023–2026

Balbhim Arts, Science and Commerce College, Beed | CGPA: 7.5 (A+)
